DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15 and 20, drawn to a transgenic plant and a nucleic acid, classified in class 800, subclass 298, for example.
- II. Claims 16-19, drawn to a method of producing a transgenic plant, classified in class 800, subclass 278, for example.

For either of Invention I or Invention II above, restriction to one of Inventions (A)-(D) is also required under 35 USC 121. Therefore, upon election of Invention I or Invention II, Applicant must also elect one of Inventions (A)-(D).

- (A) a nucleotide sequence encoding a sulfotransferase
- (B) a nucleotide sequence encoding a phenylalanine ammonium lyase
- (C) a nucleotide sequence encoding a cinnamate 4-hydroxylase
- (D) a nucleotide sequence encoding an alcohol dehydrogenase

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP

Art Unit: 1638

§ 806.05(h)). In the instant case the nucleic acid can be used in a materially different process of using that product, such as a hybridization method.

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the transgenic plant can be made by another and materially different process, such as by crossing a transgenic plant with a nontransgenic plant.

Inventions (A)-(D) are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions represent structurally different polynucleotides encoding structurally different polypeptides. Therefore, where structural identity is required, such as for expression or hybridization, the different sequences have different effects.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, their recognized divergent subject matter, and the requirement for different areas of search, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1638

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
